

Embodied Design

Let us operationalize this!

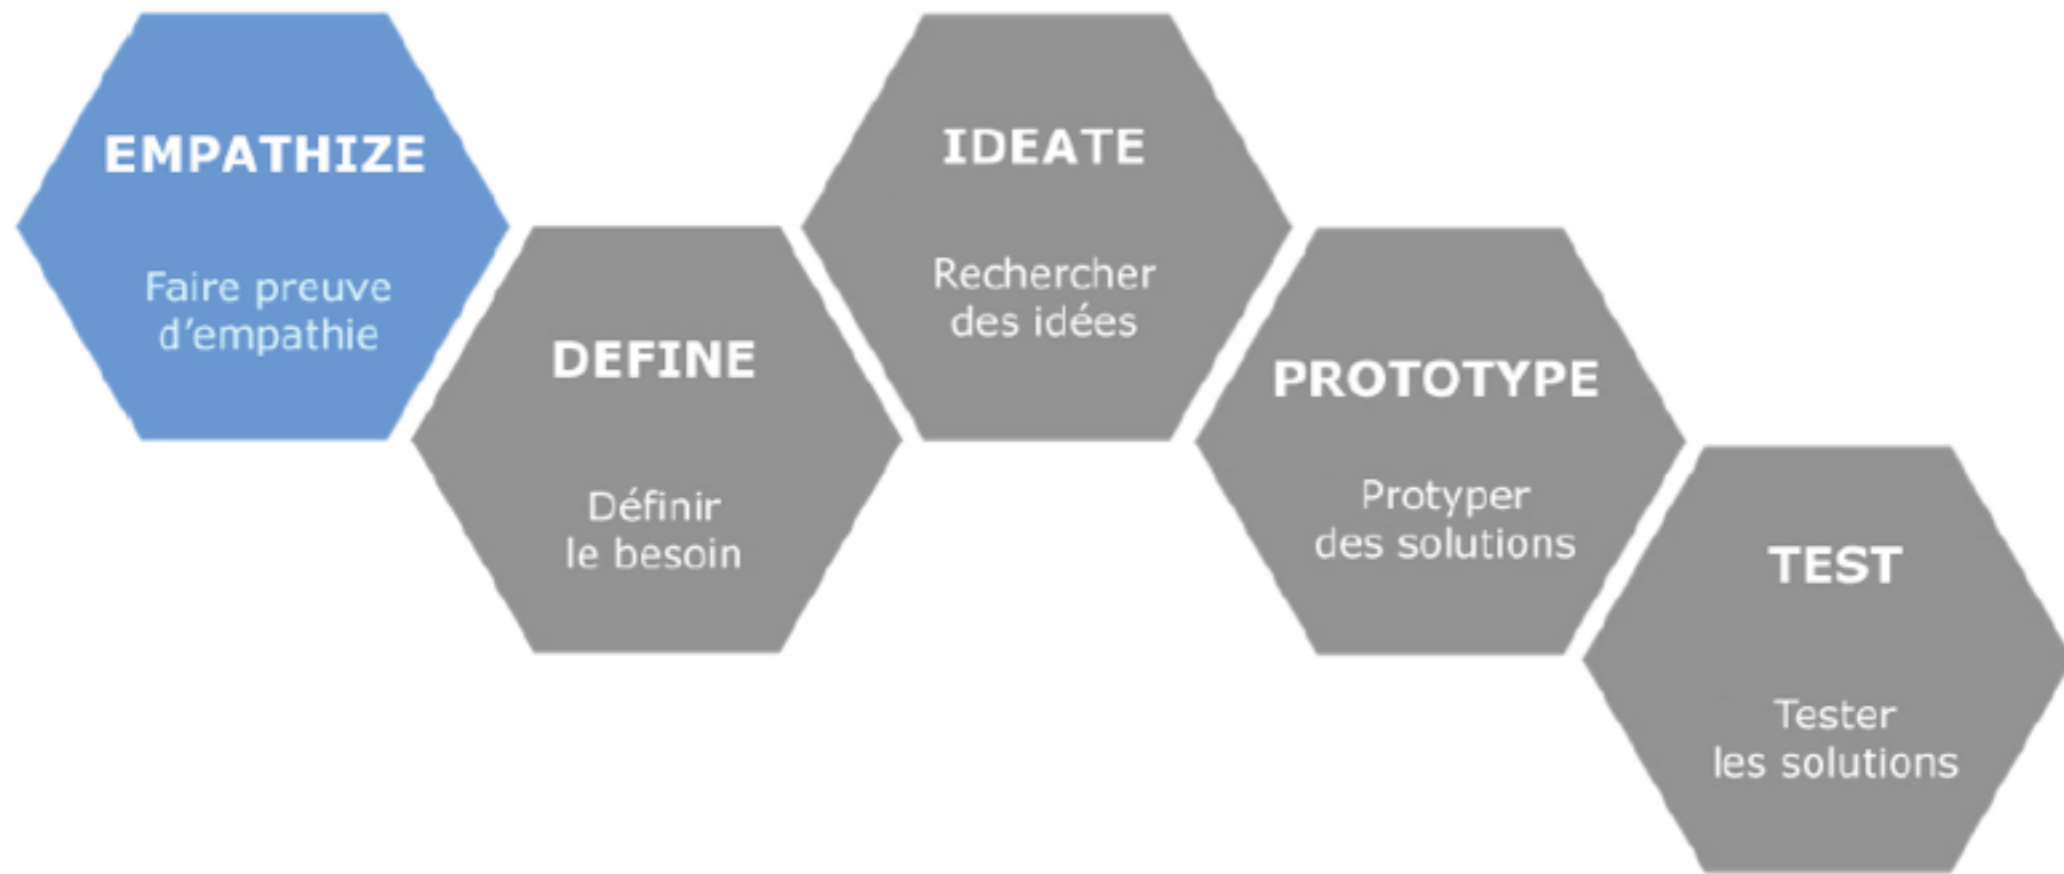

Partner up!

**Think of a body/mind activity
you were engaged in lately**

Find a representative movement

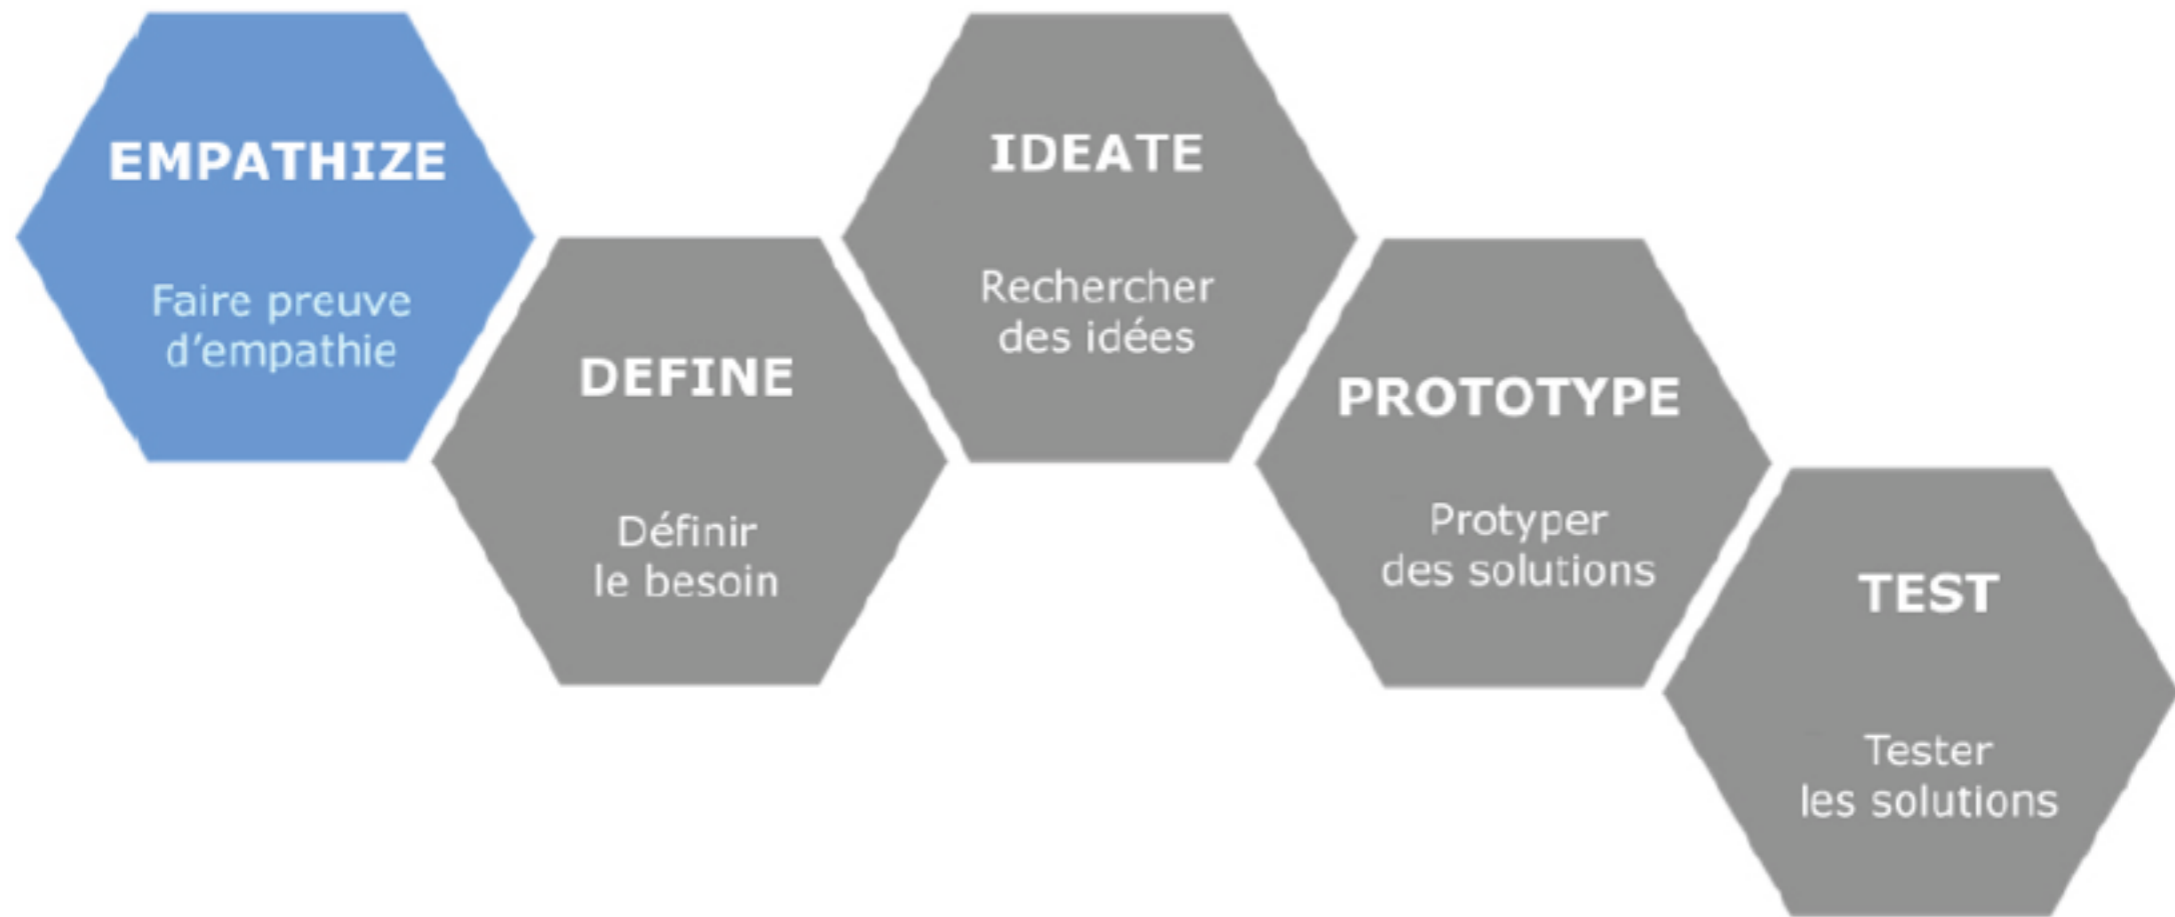

Embody it, perform it, and repeat to master it.

Show / Interview / Imitate

Investigate the experience of each other!

- Explicite each other's experiences.
- Exchange understandings of the relation between the felt sensation of the movement and (for example) the use of time, space and dynamics.

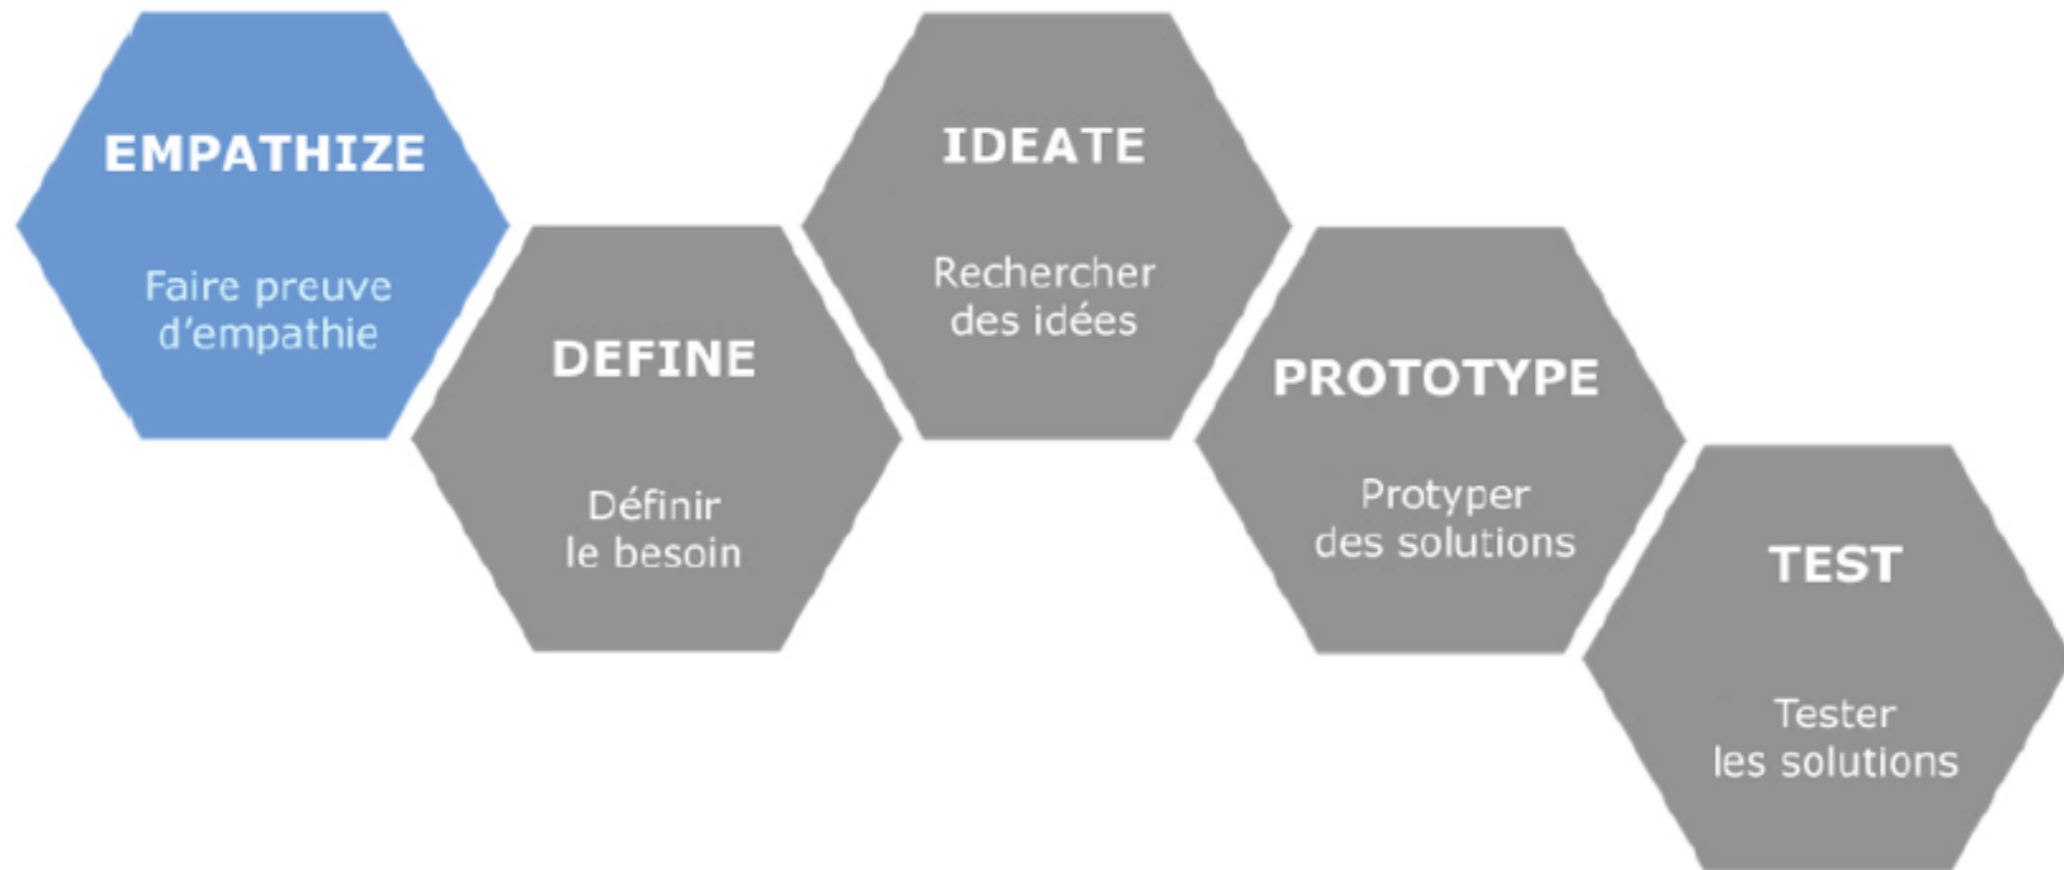

- Observe: View users and their behavior in the context of their lives.
- Engage: explicit through interviews the lived experience
- Immerse: Experience what your user experiences.

A Interview/Observe B

03 : 00

- Define the Design Space
- Define the Problem Statement
 - Find language for the felt sensations
 - Note the different forms of language each person employs in describing movement and its qualities.

**Synthesize what you
have discovered**

03:00

Articulate the problème

03 : 00

Search for ideas

- Imagine interaction scenarios using the movements of your partner, in the context of your specific design project.
 - How would you analyze and represent the movements?
 - How would you represent the machine's interpretation of the movements?
 - How would you map the movements to the machine's output?

Sketch the Solutions

- Explore the solution space with you body/mind
- Find the maximum of the solutions possible
- Have fun!
